JOB HAZARD ANALYSIS

Hazard Types (HT)		Job T	ask:	Water Emer	gency Response	Team – Un	known Contai	minant Resp	onse		
1. Toxic Chemicals	15. Fall (Slips/Trips)	Tools									
2. Flammable Chemicals	16 Fall (To a Different Level)	Flashlight, Digital Camera, Binoculars, Mirror, GPS Unit, Pressure Gauge, Clipboard, Laptop, Cell									
3. Corrosive Chemicals	17. Excavation (Collapse)	Phone/Communication Device, First Aid Kit, Colorimeter									
4. Environmental	18. Fire, Heat, Thermal, Cold	Chemicals Used: HACH Chlorine Kit to measure low level chlorine residual in drinking water									
5. Explosion (Chemical Reaction)	19. Noise										
6. Explosion (Over pressurization)	20. Radiation	Required Health & Safety Training: 1) 24hr HAZWOPER; 2) 8hr HAZWOPER Annual Refresher; 3) Defensive Driving Training; 4) Confined Space Awareness Training; 5) First Aid & CPR									
7. Mechanical/Vibration	(Ionizing/Non-Ionizing)										
8. Electrical (Shock, Short Circuit)	21. Visibility	Recommended Health & Safety Training: HAZCOM (HAZard COMmunication/chenical compatibility training									
9. Electrical (Fire)	22. Weather	specific to drinking water & wastewater operations									
10.Electrical (Static, ESD)	23. Caught (In, On, Between)	Medical Surveillance Required? No									
11.Electrical (Loss of Power)	24. Struck (By, Against)	riculcui oui vemance requireu. 170									
12.Ergonomic (Overexertion)	25. Driving	CRITICAL TO SAFETY (CTS) Risk Estimation Matrix									
13. Ergonomic (Human Error)	26. Confined Space	Probability of SEVERITY OF HARM									
14. Vibration	27. Other		Occurrence of Harm	Catastrophi	Serious	Moderate	Minor

			VER	y Likely	Extreme	High	High	Medium			
			L	IKELY	High	High	Medium	Low			

Job Description: This job hazard analysis refers to the work drinking water/wastewater teams are anticipated to perform during a response to an unknown contaminant event. This applies primarily to EPA personnel providing technical assistance to On-Scene Coordinators (OSCs) or their contractor who will be conducting on-site evaluations at drinking water and wastewater facilities. Work for the water/wastewater teams may include being in the field in a safe zone providing technical input on how to evaluate and sample drinking water and wastewater systems. Personnel may be asked to provide technical direction on how to evaluate the operational status of plants, sample finished water for a variety of constituents (depending upon leaks, releases, spills, total coliform/*E. coli*, etc), and/or monitor water tanker trucks for potability.

Step #	Procedures (LOP Procedure Step)	Potential Hazards	НТ	Check CTS	Recommended Safe Practice	PPE
1	Notification of Activation	None	NA	NA	NA	NA
2	Organize personnel/equipment/supplies; Deploy to base station	Lifting, twisting, low back strain, motor vehicle crash, weather, driving in unfamiliar areas and conditions, driver fatigue	13, 21, 22, 24, 25	Medium	Careful lifting techniques; secure grip; packing at desk level or higher; team lift for heavy objects; drive defensivly; do not use handheld devices or text while driving; ensure adequate sleep (7-8 hrs); take frequent breaks; keep updated maps & routes; keep cell phone charged and readily available for emergency communications or situational updates.	None

Step #	Procedures (LOP Procedure Step)	Potential Hazards	НТ	Check CTS	Recommended Safe Practice	PPE
3	Attend situation awareness/safety briefing; obtain information on system(s) to visit; deploy to facility location(s)	Motor vehicle crash, weather, driving in unfamiliar areas and conditions, driver fatigue	13, 21, 22, 24, 25	Medium	Defensive driving; do not use hand- held devices or text while driving; ensure adequate sleep (7-8 hrs); take frequent breaks; keep updated maps & routes; keep cell phone charged and readily available for emergency communications or situational updates.	None
4	Provide technical direction for field activities from base station or other safe location	Environmental, stress, ergonomics, slips/trips/falls, heat/cold stress, weather, noise	4, 12, 13, 15, 18, 19, 22	Low	REFERENCE HAZARD ASSESSMENT PERSONAL PROTECTIVE	
5	Drive to next location (if necessary) and repeat step 4 above	Motor vehicle crash, weather, driving in unfamiliar areas and conditions, driver fatigue	13, 21, 22, 24, 25	Medium	Defensive driving; do not use hand- held devices or text while driving; take frequent breaks; keep updated maps & routes; keep cell phone charged and readily available for emergency communications or situational updates.	None
6	At completion of day, return to base station	Motor vehicle crash, weather, driving in unfamiliar areas and conditions, driver fatigue	13, 21, 22, 24, 25	Medium	Defensive driving; do not use hand- held devices or text while driving; take frequent breaks; keep updated maps & routes; keep cell phone charged and readily available for emergency communications or situational updates.	None

Required Personal Protective Equipment

Where engineering and administrative controls are not feasible or sufficient for controlling hazards, PPE must be used to protect workers. The following PPE is required for the noted tasks: Step #4 above (provide technical direction for field activities from a base station or other safe location)

Eye	and Face Protection					
	Safety glasses with side shields	Reflective goggles/face shield				
	Chemical splash goggles		Cutting/brazing/welding eye protection			
	Face shield	X	Other: Sunglasses			
Hea	d Protection					
	Hard hat, bump cap		Helmet, cowl, hood			
	Welding helmet/mask		Other:			
Foo	t Protection					
X	Steel-toed boots		Other:			
	Chemical-resistant boots					
Bod	y Protection		T			
	Apron (splash, work)		Head-reflective garments			
	Lab coat		Sleeves (cut-resistant)			
	Coveralls (work, chemical-resistant) Hazard Type: Type coverall:	X	Other: Appropriate field gear for the weather (heat/cold stress, wet weather)			
Res	piratory Protection					
	Respirator (situation dependent)		Type of respirator:			
Har	nd Protection					
	Rubber insulating gloves		Rubber insulating sleeves			
	Rubber insulating hoods		Leather Work Gloves & Chemical Resistant Other: Gloves (type is dependant upon potential exposure)			
Refl Inse	plugs and/or muffs ective safety vest ct repellant screen					

PPE Hazard Assessment Form

Che	mical Hazards	HEALTH AND SAFETY HAZARDS Description/Mitigation
CHU	Vapors/gases	NA – Technical assistance only
	Dusts/mists/fumes	NA
	Liquid splash	NA NA
Phys	sical Hazards	Description/Mitigation
X	Penetration/punctures/cuts/lacerations/compressions	Though personnel will conduct technical assistance only, the activity can occur in various environmental settings (base station or mobile command post). Hazards should be minimal, however there is the potential for heavy equipment to be moved and stored in the surrounding area and can present a compression hazard. Personnel should wear reflective safety vests to ensure enhanced visibility. Since the mobile command post can be located in various types of terrain, penetrations/punctures/cuts/lacerations are possible. Personnel utilize steel-toed safety boots to reduce exposure.
X	Heat —high temperatures	Unknown contamination can occur anytime of the year and during all types of weather conditions, which could include extreme heat. Heat stress is a viable hazard; therefore personnel must ensure adequate hydration and appropriate field gear (light weight, loose fitting and light-colored clothing) is worn while engaging in emergency response activities. Personnel should be trained on the signs and symptoms of heat stress, heat stroke, and heat exhaustion and understand corrective measures to take.
X	Cold —cold temperatures	Unknown contamination can occur anytime of the year and during all types of weather conditions, which could include extreme cold. Cold stress is a viable hazard; therefore personnel must ensure adequate hydration and appropriate field gear (layers, protecting the extremities especially fingers, toes, nose, and ears) is worn while engaging in emergency response activities. Personnel should be trained on the signs and symptoms of frost bite and hypothermia and understand corrective measures to take.
	Electrical shock	NA
	Fire/explosion	NA
X	Noise	Employees are potentially exposed to hazardous noise due to a variety of sources during emergency response activities. Personnel may work around/near heavy equipment in use or stored near base station or mobile command post (e.g. backhoes, dump trucks, etc.) Personnel must wear ear plugs and/or muffs while around hazardous noise sources. Noise levels have not been documented. Further analysis is required.
	Confined spaces	NA
X	Slips/trips/falls	Though personnel will conduct technical assistance only, the activity can occur in various environmental settings (base station or mobile command post). Hazards should be minimal, however since the mobile command post can be located in various types of terrain, slips/trips/falls are possible. Personnel need to be cognizant of their surroundings and utilize steel-toed safety boots to reduce exposure.
X	Driving	Vehicular accidents and traffic are potential hazards encountered while driving to and from base station. Defensive driving training is required (every 3yrs). Do not use hand-held devices or text while driving. Personnel must keep updated maps and routes. Keep cell phone charged and readily available for emergency communications or situational updates.
X	Other	Fatigue is also a concern due to potentially long working hours (12-16 hours/day). Personnel must limit work shifts to a maximum of 16 hours including travel time to and from base station. Ensure adequate sleep of at least 7-8 hrs and take frequent breaks. Personnel should check weather forecasts prior to deployment and prepare for conditions prior to leaving for the site.
Biol	ogical Hazards	Description/Mitigation
	Bloodborne pathogens	NA
X	Animals	Employees may encounter a variety of animals and insects while in the field. These include aggressive dogs (domestic and/or feral), other feral animals, snakes, mosquitos, spiders, bees, wasps, etc. Personnel are not to engage animals no matter how friendly they seem. Personnel should wear appropriate field gear depending upon the location (e.g. long sleeves, long pants, insect repellent, etc). Personnel need to be cognizant of their surroundings and take evasive actions to avoid contact with animals/insects.
